Name: Wipro Tony A

Email: 240801389@rajalakshmi.edu.in

Roll no: 240801389 Phone: 9487910589

Branch: REC

Department: I ECE AF

Batch: 2028

Degree: B.E - ECE

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 4_MCQ_Updated

Attempt : 1 Total Mark : 20

Marks Obtained: 18

Section 1: MCQ

1. When new data has to be inserted into a stack or queue, but there is no available space. This is known as

Answer

overflow

Status: Correct Marks: 1/1

2. Which one of the following is an application of Queue Data Structure?

Answer

All of the mentioned options

Status: Correct Marks: 1/1

3. What will be the output of the following code?

```
#include <stdio.h>
    #include <stdlib.h>
    #define MAX_SIZE 5
    typedef struct {
      int* arr;
      int front;
      int rear;
      int size;
    } Queue;
    Queue* createQueue() {
      Queue* queue = (Queue*)malloc(sizeof(Queue));
     queue->arr = (int*)malloc(MAX_SIZE * sizeof(int));
      queue->front = -1;
      queue->rear = -1;
      queue->size = 0;
      return queue;
    int isEmpty(Queue* queue) {
      return (queue->size == 0);
    int main() {
      Queue* queue = createQueue();
      printf("Is the queue empty? %d", isEmpty(queue));
return 0;
    Answer
    Is the queue empty? 1
                                                                    Marks: 1/1
    Status: Correct
```

4. Insertion and deletion operation in the queue is known as

Answer

Enqueue and Dequeue

Status: Correct Marks: 1/1

5. What are the applications of dequeue?

Answer

All the mentioned options

Status: Correct Marks: 1/1

240801389

240801389

6. What will be the output of the following code?

```
#include <stdio.h>
    #define MAX_SIZE 5
    typedef struct {
int front;
      int arr[MAX_SIZE];
      int size:
    } Queue;
    void enqueue(Queue* queue, int data) {
      if (queue->size == MAX_SIZE) {
        return;
      }
      queue->rear = (queue->rear + 1) % MAX_SIZE;
queue->size++;
      queue->arr[queue->rear] = data;
    int dequeue(Queue* queue) {
      if (queue->size == 0) {
        return -1;
      int data = queue->arr[queue->front];
      queue->front = (queue->front + 1) % MAX_SIZE;
      queue->size--;
      return data;
    int main() {
queue.front = 0;
      Queue queue;
```

```
queue.rear = -1;
queue.size = 0;
enqueue(&queue, 1);
enqueue(&queue, 2);
enqueue(&queue, 3);
printf("%d ", dequeue(&queue));
printf("%d ", dequeue(&queue));
enqueue(&queue, 4);
enqueue(&queue, 5);
printf("%d ", dequeue(&queue));
printf("%d ", dequeue(&queue));
return 0;
}

Answer
1 2 3 4
```

7. Front and rear pointers are tracked in the linked list implementation of a queue. Which of these pointers will change during an insertion into the EMPTY queue?

Marks: 1/1

Answer

Status: Correct

Both front and rear pointer

Status : Correct Marks : 17

8. A normal queue, if implemented using an array of size MAX_SIZE, gets full when

Answer

Rear = MAX_SIZE - 1

Status: Correct Marks: 1/1

9. After performing this set of operations, what does the final list look to contain?

InsertFront(10); InsertFront(20); InsertRear(30); DeleteFront(); InsertRear(40); InsertRear(10); DeleteRear(); InsertRear(15); display(); Answer 10 30 40 15 Status: Correct

Marks : 1/1

10. In linked list implementation of a queue, the important condition for a queue to be empty is?

Answer

FRONT is null

Marks: 1/1 Status: Correct

11. Which operations are performed when deleting an element from an array-based queue?

Answer

Dequeue

Status: Correct Marks: 1/1

12. The essential condition that is checked before insertion in a queue is?

Answer

Overflow

Status : Correct Marks : 1/1 13. The process of accessing data stored in a serial access memory is similar to manipulating data on a

Answer

Stack

Status: Wrong Marks: 0/1

14. Which of the following can be used to delete an element from the front end of the queue?

Answer

None of these

Status : Wrong Marks : 0/1

15. What will the output of the following code?

```
#include <stdio.h>
    #include <stdlib.h>
    typedef struct {
      int* arr;
      int front;
      int rear;
    int size;
  \ \} Queue;
    Queue* createQueue() {
      Queue* queue = (Queue*)malloc(sizeof(Queue));
      queue->arr = (int*)malloc(5 * sizeof(int));
      queue->front = 0;
      queue->rear = -1;
      queue->size = 0;
      return queue;
    int main() {
printf("%d", queue->size);
return 0;
      Queue* queue = createQueue();
```

Answer

Λ

Status: Correct Marks: 1/1

16. Which of the following properties is associated with a queue?

Answer

First In First Out

Status: Correct Marks: 1/1

17. What does the front pointer in a linked list implementation of a queue contain?

Answer

The address of the first element

Status: Correct Marks: 1/1

18. In what order will they be removed If the elements "A", "B", "C" and "D" are placed in a queue and are deleted one at a time

Answer

ABCD

Status: Correct Marks: 1/1

19. In a linked list implementation of a queue, front and rear pointers are tracked. Which of these pointers will change during an insertion into a non-empty queue?

Answer

Only rear pointer

Marks: 1/1 Status: Correct 20. What is the functionality of the following piece of code? public void function(Object item) Node temp=new Node(item,trail); if(isEmpty()) head.setNext(temp); temp.setNext(trail); 24080 else Node cur=head.getNext(); while(cur.getNext()!=trail) cur=cur.getNext(); cur.setNext(temp); } size++; } **Answer** Insert at the rear end of the dequeue Status: Correct Marks: 1/1
